Partner Search for EUROSTARS - AI Powered Next Generation Battery Management System for HV Battery Systems. A European-based SME company, specialized in providing state-of-the-art software solutions for battery management systems for both embedded and cloud. The company actively seeks collaborations under a R&D agreement to address challenges faced by electric vehicle batteries; including range, lifetime, safety and re-usability. The project aims to develop next-generation, data-driven BMS by merging cutting-edge hardware and software solutions to improve lifetime and performance of EV batteries.

Various types of partners are required to complete a LIFE Programme consortium for the ecological restoration of a Mediterranean River, to enhance the resilience of local ecosystems and urban areas against climate-induced hydrological risks. The ecological restoration of this typical Mediterranean small-middle-sized (20 Km long) River from a reservoir to its mouth on the coast aims to reinstate the river's natural hydro-morphological conditions, enhancing biodiversity, and reconnecting the river with local communities, contributing thus to the resilience of local ecosystems and urban areas against climate-induced hydrological risks.

LIFE Call for Proposals: Italian startup is looking for two farms interested in testing the impact of agri-voltaic systems on crop health and productivity (Deadline 17 September 2024). The project aims to revolutionise agricultural sustainability through an innovative monitoring system based on biocompatible sensors integrated inside the plant stems. This system can assess the stress and predict the productivity and quality of crops under agrivoltaics systems. To complete the consortium, the Italian start-up is searching for two farms (oranges, olives, vineyards, etc.) interested in acting as testbeds to test and monitor the impact of agrivoltaic systems on the crops.
