A Turkish Company is looking for project partners about the AI-powered autonomous optimization systems related to their current Eurostars 3 program application. The company is developing a fully autonomous AI-driven optimization assistant that learns device usage patterns and environmental factors to make predictive decisions. The solution optimizes RAM, CPU, storage, and energy consumption, operating both online and offline, with a central management panel for enterprises. A freemium model ensures accessibility, while modular AI and ad-based revenue support scalability.
